Windows 365 Backup and Restore

Technolutions Windows 365 Backup and Restore is a purpose-built solution. It allows you to manage and safeguard your data.

This is achieved by providing protection against accidental deletion, threats internal and external, and ransomware attacks.

Why is it important to back up Microsoft 365, even when it's hosted in the cloud?

Recycle bins are not backup solutions, and Cloud Providers do not backup your data. Having your data centrally located provides seamless access for your staff.

This makes working from anywhere easier. However, it also increases the chances of data loss. This loss can involve critical items such as a Calendar entry or a deleted folder that has gone missing, which is crucial for auditing, reporting, or corporate governance.

Why use our solution

Peering: Our Network peers directly with the Microsoft Network which decreases backup and recovery time

Unlimited Retention: Your company decides on the policy of how long you would like to Backup your data. Anything from 7 days to Unlimited.

Immutable replicated backups: Locks down your backup making it inaccessible to ransomware in multiple dc's.

Recoverability: Your data is 100% recoverable at any point in time based on your retention policy in days or years.

Compliance and Legal Requirements: With VEEAM 365 you can extract data required for Compliance or Legal discovery, without compromising any data that has no relevance to the matter at hand using eDiscovery.
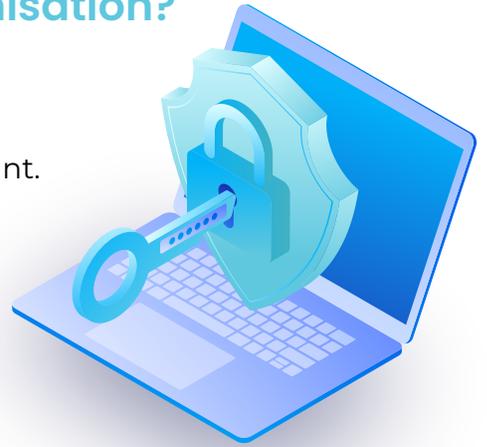

How does the protection benefit your organisation?

As protecting your data on the Windows 365 platform is your responsibility, VEEAM 365 provides protection for your entire organization's data stored in your Windows 365 tenant.

With it being a hassle-free solution, new employees, groups, and sites become part of your backup strategy from the moment they start contributing to your company.

Once employees leave, the data remains intact, and you can gain access to it via the Self-Service Portal.

What protection does our solution cover.

| Microsoft Exchange Online. | Microsoft One Drive for Business, items and folders. | Microsoft Teams, channels, tabs, posts and files. | Microsoft SharePoint Sites, libraries and items. | Granular Searching and Granular Recovery on all objects and items. |
